

Review of the Statutory Minimum Wage Rate: Relevant Reference Data and Information

The Minimum Wage Commission (MWC) is now conducting a review of the Statutory Minimum Wage (SMW) rate. This document sets out the relevant data and information for reference of the public and relevant organisations so as to facilitate their submission of views to MWC on the review of the SMW rate. All relevant data and information are for reference only and do not imply that MWC has any preconceived stance or has come to any conclusion on its recommendation about the SMW rate. Upon completion of the review, MWC will make recommendation on whether to maintain or adjust the SMW rate, and where applicable, the direction and magnitude of adjustment. MWC looks forward to receiving views from various sectors of the community on the review of the SMW rate.

Introduction

The Minimum Wage Commission (MWC) is tasked to report to the Chief Executive in Council its recommendation about the Statutory Minimum Wage (SMW) rate. According to the Minimum Wage Ordinance (Chapter 608 of the Laws of Hong Kong), in performing its function, MWC must have regard to the need to maintain an appropriate balance between the objectives of forestalling excessively low wages and minimising the loss of low-paid jobs, and the need to sustain Hong Kong's economic growth and competitiveness. Before arriving at its recommendation, MWC will consult and consider the views from various sectors of the community including organisations representing employers and employees, and analyse relevant data and information.

2. In reviewing the SMW rate, MWC will not only consider the views from the public and relevant organisations, but also examine the Array of Indicators (AoIs) (paragraphs 4 to 6 below), make reference to other considerations relevant to the review of the SMW rate (paragraph 7 below), and conduct assessment on the possible impact of different SMW test levels on employees, enterprises, unemployment rate and inflation (paragraph 8 below).

3. To enhance the transparency of MWC’s work, this document provides relevant data and information, including the latest data on AoIs and supplementary statistical data relevant to the review of the SMW rate, for reference of the public and relevant organisations. All relevant data and information are for reference only and do not imply that MWC has any preconceived stance or has come to any conclusion on its recommendation about the SMW rate. MWC hopes that various sectors of the community would actively express their views on the review of the SMW rate.

Array of Indicators

4. Based on an evidence-based approach and drawing on its previous experience, MWC is of the view that it could facilitate the review of the SMW rate by regularly monitoring latest statistics that reflect the socio-economic and employment conditions and undertaking thorough analysis of relevant quantitative indicators.

5. Making reference to the relevant indicators referred to in the past reviews of the SMW rate, MWC initially considers that AoIs covering the following four areas can be maintained:

- (i) general economic conditions;
- (ii) labour market conditions;
- (iii) competitiveness; and
- (iv) social inclusion.

6. AoIs covers the essential considerations that MWC must take into account in discharging its function and provides MWC with important information for the review. AoIs initially identified by MWC and the latest statistics on these indicators are listed in Appendices I and II respectively. The data on employees’ entitlement to paid rest day(s) and/or paid meal break(s)¹ by sector and the sectoral operating characteristics of enterprises are set out at Appendices III and IV respectively.

¹ Whether employees are granted rest day pay and/or meal break pay according to their employment contract or agreement.

Other Relevant Considerations

7. In addition to the data on AoIs covering the four areas as mentioned above, MWC will also take into account other factors that are pertinent to the review of the SMW rate but cannot be fully quantified. The other relevant considerations set out below were the situations observed by MWC in the past SMW rate reviews, but they do not imply that MWC has any preconceived stance on these considerations:

- (i) **Enhancing employees' quality of life** – Benefiting from the implementation and upratings of SMW in the past, and the relatively tight labour market back then, employees enjoyed pay rises which in turn increased their consumption power and improved their quality of life. SMW could also serve to forestall excessively low wages in times of economic downturn;
- (ii) **Enhancing work incentive** – The implementation and upratings of SMW helped forestall excessively low wages, thereby attracting more people to enter or re-enter the labour market and providing a conducive environment that encouraged people who used to live on social welfare supplements to re-enter the labour market and become self-reliant;
- (iii) **Impact on workers with relatively lower bargaining power and less work experience** – Benefiting from the implementation of SMW, the wages of vulnerable groups (such as older people, people with disabilities, less-educated and lower-skilled workers) were protected. However, in the face of increasing labour costs, employers might tend to hire employees with higher capabilities or more work experience, which might in turn undermine the employment opportunities of the vulnerable groups. Besides, some employers might reduce employment of young people with less work experience and offer them fewer training and internship opportunities, making it difficult for young people to accumulate work experience and climb up the social ladder;
- (iv) **Impact on wage differentials across sectors or positions** – With a uniform SMW rate, grassroots workers could choose to work in different sectors, occupations, districts and/or enterprises while still earning a comparable income. This would however aggravate staff

turnover in certain sectors. To some extent, the enterprises concerned needed to offer higher wage rates to retain their existing employees or attract new recruits, thereby further pushing up labour costs;

- (v) **Preserving the market's capacity to adjust** – While imposing a wage floor, SMW also limited the flexibility of wage adjustment. If the rate was raised to an excessively high level, SMW would undermine the flexibility of different sectors and enterprises in responding to changes in their business environment. Preserving some room for the market's wage adjustment would be conducive to the sustainable development of all sectors;
- (vi) **Impact on social harmony** – The implementation and upratings of SMW enabled low-income employees to share the fruits of economic development and thus helped promote social harmony. Nevertheless, grassroots workers, enterprises and other people (including those not directly benefiting from SMW) might have divergent views on the SMW rate;
- (vii) **Additional costs induced by wage increase** – The implementation and upratings of SMW entailed additional cost implications for enterprises in terms of premium for employees' compensation insurance and contributions to the Mandatory Provident Fund, etc.;
- (viii) **Impact on quality of products and services** – Employees enjoyed wage protection after the implementation and upratings of SMW. Nevertheless, this might reduce the incentive of some employees to improve their performance or take up extra work, thereby affecting service quality. Moreover, enterprises that failed to pass on the SMW-induced additional labour costs to customers or consumers might choose to reduce the quality of their products or services, especially when the overall economic environment was weak; and
- (ix) **Long-term impact in various aspects** – For instance, the impact on profitability and long-term operating strategies of enterprises, Hong Kong's competitiveness in the long run, labour productivity and the attractiveness to foreign investment, etc.

Impact Assessment

8. In conducting the impact assessment, MWC will draw reference from the framework, scope and methodology of impact assessment² adopted in the last review of the SMW rate and consider the experiences of past reviews of the SMW rate, relevant socio-economic indicators and the views of members of the public and stakeholders, in order to analyse the possible impact of different SMW test levels on employees, enterprises, unemployment rate and inflation. In reviewing the SMW rate, MWC will take into consideration the time gap between the review of the SMW rate and the implementation of the recommended rate. MWC will endeavour to conduct a forward-looking estimation which takes into account the knock-on effect on pay hierarchies not only using statistical data on employees' wage distribution in May - June 2021 from the 2021 "Annual Earnings and Hours Survey" of the Census and Statistics Department as a base for estimation, but also making reference to the latest wage statistics and economic situation.

Supplementary Statistical Data

9. To facilitate the public and relevant organisations to understand the wage distribution of employees³ by sector in the 2021 "Annual Earnings and Hours Survey" in the survey reference period (i.e. May - June 2021), supplementary statistical data based on the results of the said survey are listed in Annex.

10. It is noteworthy that the above supplementary statistical data are for reference only, and MWC does not have any preconceived stance or has not come to any conclusion on its recommendation about the SMW rate. Upon completion of the review, MWC will make recommendation on whether to maintain or adjust the SMW rate, and where applicable, the direction and magnitude of adjustment.

Minimum Wage Commission
April 2022

² For details of the framework, scope and methodology of impact assessment, please refer to Section 4.IV and Appendix IV in the *2020 Report of the Minimum Wage Commission*.

³ Employees do not include those not covered by SMW (i.e. government employees, live-in domestic workers, student interns and work experience students as defined in the Minimum Wage Ordinance).

Appendix I: Array of Indicators Initially Identified by the Minimum Wage Commission

Area Considered	Summary of Indicators	Statistical Indicators	Data Sources [Source hyperlinks]	Frequency of Update
(I) General Economic Conditions	I.1 Latest local economic performance and forecasts	Nominal and real Gross Domestic Product (GDP)	National Income Statistics, Census and Statistics Department (C&SD) [1]	Quarterly
		Real GDP by main expenditure components	(Same as above) [2]	(Same as above)
		Composite Consumer Price Index and Consumer Price Index (A)	Monthly Retail Price Survey, C&SD [3]	Monthly
		Prominent establishments' views on expected changes in short-term business situation and number of persons engaged	Quarterly Business Tendency Survey, C&SD [4]	Quarterly
		GDP and price forecasts	Office of the Government Economist, Financial Secretary's Office [5]	Short-term: Quarterly/ Medium-term: Annual
(II) Labour Market Conditions	II.1 Labour demand and supply – employment, unemployment, underemployment, labour force and vacancies	Labour statistics	General Household Survey, C&SD [6]	Monthly [#]
		Vacancies	Quarterly Survey of Employment and Vacancies, C&SD [7]	Quarterly
		Mode of leaving last job of unemployed persons with a previous job	General Household Survey, C&SD [8]	Monthly [#]
	II.2 Wage level and distribution	Wage level and distribution	Annual Earnings and Hours Survey, C&SD [9]	Annual
	II.3 Wage differentials	Wage differentials	Annual Earnings and Hours Survey, C&SD [9]	Annual
	II.4 Employment characteristics	Employed persons analysed by employment status	General Household Survey, C&SD [8]	Monthly [#]
		Employees analysed by employment nature and contractual status	Annual Earnings and Hours Survey, C&SD [9]	Annual
		Employees analysed by basis on which basic wage rate is rated	(Same as above) [9]	(Same as above)
		Employees analysed by remuneration structure	(Same as above) [9]	(Same as above)
	II.5 Working hours	Distribution of working hours	Annual Earnings and Hours Survey, C&SD [9]	Annual
Overtime hours with pay		(Same as above) [9]	(Same as above)	
Hours of work during the 7 days before enumeration		General Household Survey, C&SD [10]	Monthly [#]	

Note: # Indicating the overall situation of the past 3-month period.

Area considered	Summary of indicators	Statistical indicators	Data sources [Source hyperlinks]	Frequency of update
(III) Competitiveness	III.1 Operating characteristics of enterprises	Operating characteristics analysed by sector (only including enterprises with employees)	Annual Survey of Economic Activities, C&SD [11]	Annual
		Rental indices of non-residential properties	Rating and Valuation Department [12]	Monthly
		Total retail sales	Monthly Survey of Retail Sales, C&SD [13]	Monthly
		Total restaurant receipts	Quarterly Survey of Restaurant Receipts and Purchases, C&SD [14]	Quarterly
		Business receipts indices	Quarterly Survey of Service Industries, C&SD [15]	Quarterly
	III.2 Entrepreneurship, business sentiment and solvency	Number of establishments	Quarterly Survey of Employment and Vacancies, C&SD [7]	Quarterly
		Labour demand	(Same as above) [7]	(Same as above)
		Number of new business registration	Inland Revenue Department [16]	Monthly
		Number of cancellation of business registration	Inland Revenue Department [17]	Annual
		Number of bankruptcy and compulsory winding-up cases	Official Receiver's Office [18]	Monthly
	III.3 Relative economic freedom and competitiveness of Hong Kong	Hong Kong's rankings on indices of economic freedom and competitiveness	Various rating agencies [19] [20] [21]	Annual
		Regional headquarters, regional offices and local offices in Hong Kong with their parent companies located outside Hong Kong	Annual Survey of Companies in Hong Kong with Parent Companies Located outside Hong Kong, C&SD [22] [23] [24]	Annual
		Inward direct investment	Survey of External Claims, Liabilities and Income, C&SD [25]	Quarterly
	III.4 Productivity growth	Labour productivity growth in Hong Kong and other places	Hong Kong: National Income Statistics and Composite Employment Estimates, C&SD [1] [26]	Annual
			Other places: National statistics authorities, CEIC and Datastream databases	Annual
	III.5 Labour costs	Changes in unit labour cost in Hong Kong and other places	Hong Kong: National Income Statistics, General Household Survey and Labour Earnings Survey, C&SD [1] [8] [27]	Annual
			Other places: National statistics authorities, CEIC and Datastream databases	Annual

Area considered	Summary of indicators	Statistical indicators	Data sources [Source hyperlinks]	Frequency of update
(IV) Social Inclusion	IV.1 Standard of living	Wage indices / indices of payroll per person engaged	Labour Earnings Survey, C&SD [28] [29] [30] [31]	Quarterly
		Employment earnings of full-time employees analysed by decile group	General Household Survey, C&SD	-
		Average monthly employment earnings	(Same as above)	-
	IV.2 Enhancing work incentive	Labour force participation rate	General Household Survey, C&SD [32]	Monthly [#]
Number of long-term unemployed (unemployed for 6 months or above) persons		(Same as above) [8]	(Same as above) [#]	
	Unemployment cases of Comprehensive Social Security Assistance	Social Welfare Department [33]	Monthly	
IV.3 Labour relations	Number of disputes and claim cases	Labour Department	Quarterly	

Note: # Indicating the overall situation of the past 3-month period.

Notes: Please refer to data sources and the hyperlinks in [Appendix I](#) for detailed figures.

(6) Revised figures. These "revised figures" are still subject to further regular revision later on when more data are incorporated.

(^^) Calculated based on the 2019/20-based Consumer Price Index series.

(*) Net balance indicates the direction of expected change in the business situation versus the preceding quarter. It refers to the difference in percentage points between the proportion of establishments choosing "better" over that choosing "worse". A positive sign indicates a likely upward trend while a negative sign, a likely downward trend.

(**) Net balance indicates the direction of expected change in the number of persons engaged versus the preceding quarter. It refers to the difference in percentage points between the proportion of establishments choosing "up" over that choosing "down". A positive sign indicates a likely upward trend while a negative sign, a likely downward trend.

(§) The trend rates of change for 2023-26 are forecasts as stated in the 2022-23 Budget.

(^) Preliminary figures.

[] Year-on-year rate of change.

(+) Seasonal adjustment is not applicable to annual figures.

(++) Excluding those in the civil service.

(&&) The quarterly figures refer to those for March, June, September and December 2021 respectively.

(!!) The annual figures refer to the averages of the figures for March, June, September and December of the respective year.

<> Seasonally adjusted quarter-to-quarter rate of change.

(#) The annual figures refer to the figures for May to June of the respective year.

.. Not applicable.

(C) All sectors	1 568.4	60.1	524.4	20.1	251.6	9.6	265.7	10.2

Notes: (1) Refers to whether employees are granted rest day pay and/or meal break pay according to their employment contract or agreement. Employees exclude government employees; student interns, work experience students and live-in domestic workers as exempted by the Minimum Wage Ordinance; as well as employees with zero working hours in the survey reference period.

(2) An employee is regarded as working full-time if he or she could not be classified as a part-time employee.

(An employee is regarded as working part-time if one of the following conditions is met: (i) the number of usual days of work per week is less than 5 (for a person with a fixed number of working days per week); or (ii) the number of usual hours of work per working day is less than 6 (for a person with a fixed number of working days per week); or (iii) the number of usual hours of work per week is less than 30 (for a person without a fixed number of working days per week). However, persons who usually work 24 hours per shift are not regarded as part-time employees, regardless of the number of usual days of work per week.)

(3) Please refer to [Supplementary Statistical Table A](#) for coverage of individual sectors.

(4) The Minimum Wage Commission defined "low-paying sectors" as sectors employing a relatively large number of low-paid employees or sectors with a relatively large proportion of low-paid employees among all employees within the sectors.

* Estimates are not released due to relatively large sampling error.

Owing to rounding, there may be a slight discrepancy between the sum of individual items and the total as shown in the table.

Notes: (1) In this table, a business establishment is defined as an economic unit (i.e. a unit engaged in the production of goods or services) which engages, under a single ownership or control, in one or predominantly one kind of economic activity at a single physical location. An enterprise consists of one or more business establishments which engage, under a single ownership or control, in one or predominantly one kind of economic activity at one or more locations. Figures were rounded to the nearest ten.

(2) In this table, small and medium enterprises refer to those enterprises with fewer than 50 persons engaged.

(3) Please refer to [Supplementary Statistical Table A](#) for coverage of individual sectors.

(4) Since the COVID-19 epidemic dealt a heavy blow to the economy, the Government provided various subsidies / assistance to enterprises in 2020 via different schemes (e.g. the Employment Support Scheme under the Anti-epidemic Fund and various industry-specific support schemes). These Government subsidies / assistance were included as part of "business receipts" in the 2020 Annual Survey of Economic Activities.

(5) Earnings before tax ratio (abbreviated as profit ratio) refers to ratio of profit before deducting tax; gain/loss on disposal of property, machinery and equipment; bad debts/write-off; provisions; etc.; to business receipts.

(6) Not including those enterprises without business receipts and local representative offices of overseas companies.

(7) The Minimum Wage Commission defined "low-paying sectors" as sectors employing a relatively large number of low-paid employees or sectors with a relatively large proportion of low-paid employees among all employees within the sectors.

(8) In calculating figures for business receipts and profit, subsidies from government and other organisations were also included.

^ Data not released.

Owing to rounding, there may be a slight discrepancy between the sum of individual items and the total as shown in the table.

Supplementary Statistical Data

Based on the findings of the 2021 “Annual Earnings and Hours Survey” of the Census and Statistics Department, Minimum Wage Commission (MWC) provides the following supplementary statistical data:

- (i) the number and proportion of employees earning the prevailing Statutory Minimum Wage (SMW) rate and those earning wages less than some higher wage rates by sector (Supplementary Statistical Table I);
- (ii) assuming that the SMW rate had already been adjusted to the different test levels in May – June 2021 and that the hourly wages of all employees originally earning wages less than these test levels were uniformly raised to the respective test levels, the estimated changes in wages of these employees by sector (Supplementary Statistical Table II); and
- (iii) assuming that the SMW rate had already been adjusted to the different test levels in May – June 2021 and that the hourly wages of all employees originally earning wages less than these test levels were uniformly raised to the respective test levels, the estimated changes in wage bills of all enterprises, and small and medium enterprises by sector (estimations have not taken into account the knock-on effect on pay hierarchies) (Supplementary Statistical Tables III a & III b).

2. As there are no employees earning less than the prevailing SMW rate of \$37.5 per hour under the Minimum Wage Ordinance (other than those with disabilities who have completed productivity assessment under the SMW regime), the methodology for estimating the changes in wages in Supplementary Statistical Table II and the changes in wage bills in Supplementary Statistical Tables III a & III b is not applicable to test levels below \$37.5. Nonetheless, in reviewing the SMW rate, MWC will set assumptions for different hypothetical test level scenarios (including upward or downward adjustments) so as to estimate the changes in overall wage bill of all enterprises under different test levels. Specifically, MWC will take into consideration the time gap between the review of the SMW rate and the implementation of the recommended rate. MWC will endeavour to

conduct a forward-looking estimation which takes into account the knock-on effect on pay hierarchies not only by using statistical data on employees' wage distribution in May – June 2021 as a base for estimation, but also by making references to the latest wage statistics and economic situation.

3. Besides, it is noteworthy that the data and test levels are for reference only. MWC does not have any preconceived stance on its recommendation on the SMW rate. Upon completion of the review, MWC will make recommendation on whether to maintain or adjust the SMW rate, and where applicable, the direction and magnitude of adjustment.

Supplementary Statistical Table I: The number and proportion of employees^(Note 1) earning the prevailing Statutory Minimum Wage (SMW) rate and those earning wages less than some higher wage rates by sector (May - June 2021)

(The data are provided for reference only. The Minimum Wage Commission (MWC) does not have any preconceived stance on its recommendation on the SMW rate. Upon completion of the review, MWC will make recommendation on whether to maintain or adjust the SMW rate, and where applicable, the direction and magnitude of adjustment.)

Notes: (1) Employees exclude government employees; student interns, work experience students and live-in domestic workers as exempted by the Minimum Wage Ordinance; as well as employees with zero working hours in the survey reference period.
(2) Hourly wage levels are computed in accordance with the definition of wages as set out in the Minimum Wage Ordinance.
(3) Please refer to [Supplementary Statistical Table A](#) for coverage of individual sectors.
(4) The Minimum Wage Commission defined "low-paying sectors" as sectors employing a relatively large number of low-paid employees or sectors with a relatively large proportion of low-paid employees among all employees within the sectors.
* Estimates are not released due to relatively large sampling error.
Owing to rounding, there may be a slight discrepancy between the sum of individual items and the total as shown in the table.

Supplementary Statistical Table II: Assuming that the SMW rate had already been adjusted to the different test levels in May - June 2021 and that the hourly wages of all employees^(Note 1) originally earning wages less than these test levels were uniformly raised to the respective test levels, the estimated changes in wages^(Note 2) of these employees by sector

(As there are no employees earning less than the prevailing SMW rate of \$37.5 per hour under the Minimum Wage Ordinance (other than those with disabilities who have completed productivity assessment under the SMW regime), the estimation methodology adopted for this table is not applicable to test levels below \$37.5. Nonetheless, in reviewing the SMW rate, the Minimum Wage Commission (MWC) will set assumptions for different hypothetical test level scenarios (including upward or downward adjustments) so as to estimate the changes in overall wage bill of all enterprises under different test levels. Specifically, MWC will take into consideration the time gap between the review of the SMW rate and the implementation of the recommended rate. MWC will endeavour to conduct a forward-looking estimation which takes into account the knock-on effect on pay hierarchies not only by using statistical data on employees' wage distribution in May - June 2021 as a base for estimation, but also by making references to the latest wage statistics and economic situation.

Besides, it is noteworthy that the data and test levels are for reference only. MWC does not have any preconceived stance on its recommendation on the SMW rate. Upon completion of the review, MWC will make recommendation on whether to maintain or adjust the SMW rate, and where applicable, the direction and magnitude of adjustment.)

12. Others	D-E	B, D-E

Notes: (1) The Hong Kong Standard Industrial Classification Version 2.0 (HSIC V2.0) is modelled on the International Standard Industrial Classification of All Economic Activities Revision 4 (ISIC Rev. 4), which was released by the United Nations Statistics Division in August 2008 and is the latest international statistical standard for industrial classification. HSIC V2.0 has been used progressively in different surveys by Census and Statistics Department (C&SD) since 2009 as a standard framework for classifying business establishments into industry classes as well as for compilation, analysis and dissemination of statistics by industry. A full index of HSIC V2.0 industry codes and titles is available from the publication entitled *Hong Kong Standard Industrial Classification (HSIC) Version 2.0*, which can be downloaded free of charge from the website of C&SD (www.censtatd.gov.hk).

(2) The Minimum Wage Commission defined “low-paying sectors” as sectors employing a relatively large number of low-paid employees or sectors with a relatively large proportion of low-paid employees among all employees within the sectors.

(3) Sectors other than those in (A) above.
